

# MOU PAUL

Engineering leader focused on reliable, large-scale infrastructure. Proven success architecting token pipelines at trillion-scale, leading high-stakes integrity and anti-spam initiatives, and delivering \$10M+ in infra efficiencies.

## Technical Skills

Language Python Golang Typescript/Javascript Rust  
Platform Kubernetes Docker Spark BigQuery BigTable Node.js gRPC  
Infra Kafka Consul Vault Nginx Redis Sqlite  
Library Ray Pytorch Rocksdb Electron Next.js React

## Selected Projects

Building Flow Matching Models from Scratch  
<https://paul.mou.dev/posts/2026-03-10-flow/>  
  
Listening with LLM  
<https://go.mou.dev/blog-llm>

## Professional Experiences

- |                                                                                                                                                                                                                                                                                                                                                                                                                                     |                 |
