

MOU PAUL

Engineering leader focused on large scale infrastructure.
Proven track record of architecting pipelines for trillions of
training tokens, fighting spam at scale, and driving \$10M+
in infrastructure cost efficiencies

Professional Experiences

Member of Technical Staff @ Microsoft AI, Redmond 2024/12-Present

- Architected petabyte-scale Spark/Ray data pipelines to process trillions of tokens from 3B+ unstructured PDFs for LLM pre-training, utilizing ablation studies to refine data-mixture strategies
- Engineered automated filtering and deduplication workflows using vector embeddings and LLM-as-a-Judge to curate high-fidelity training sets from raw, unstructured data

Software Engineer @ Roblox, San Mateo 2022/05-2024/12

- Led the evolution of Roblox's analytics ingestion infrastructure, scaling to 2+ trillion events/day while delivering \$10M+ in annual cloud savings with datalake schematization
- Promoted DevOps best practices via code-based dashboard and alert generation, runbook documentation, capacity planning, and incident postmortems

Software Engineer @ Twitter, San Francisco 2018/06-2022/04

- Scaled smyte's anti-spam infrastructure 10x post-acquisition through rearchitecture and integration with Twitter infrastructure
- Hardened data privacy for GDPR compliance by designing a personal data anonymizer system for the anti-spam infrastructure

Software Engineer @ Smyte, San Francisco 2015/11-2018/06

- Core member of four engineers building and scaling Smyte's anti-spam engine protecting hundreds of millions of users
- Developed and maintained automation and monitoring for multiple kubernetes cluster with thousands of pods
- Contributed to high impact initiatives such as GDPR compliance and building first machine learning stack for abusive image detection

Educations

Udacity
Self-Driving Car Engineer I
Certificate

Stanford University
Computer Science
Master (withdrew)

University of Waterloo
System Design
Bachelor
